

User Personas

Four personas covering Sarvam AI's real buyer and user spectrum: the independent developer, the enterprise buyer, the startup builder, and the public-sector stakeholder.

PERSONAS 4	BUYING MOTIONS Self-serve · Sales-led · Programme · Procurement	PRIMARY FOCUS Rohan (developer)	WHY FOUR Each maps to a different Sarovam surface
---------------	---	------------------------------------	---

Sarovam's roadmap has to serve buyers whose needs barely overlap. A developer wants a working call in ten minutes; a government programme officer wants an auditable deployment that never leaves Indian soil. Naming all four keeps later prioritisation honest about who a decision actually helps.

2.1 Persona 1 — "Rohan," the Independent Developer

Rohan, 24		SELF-SERVE · HIGHEST VOLUME
ROLE	Full-stack / backend developer at a small startup, or freelancing	
GOAL	Add a Hindi or Tamil voice bot / speech-to-text feature to his app without building an ML pipeline from scratch	
MOTIVATION	Speed, low cost, good documentation, INR billing with no forex hassle	
PAINS	Global APIs (Whisper, Google STT) are expensive in USD and mediocre on code-mixed Hindi; it is unclear which Sarvam model fits his use case	
SUCCESS	First working API call within 10 minutes; predictable ₹ cost per 1,000 users	
CHANNELS	Discord community, docs.sarovam.ai, GitHub, developer threads on X	

2.2 Persona 2 — "Ananya," the Enterprise Product Buyer

Ananya		SALES-LED · HIGHEST ARPU
ROLE	VP or Head of Digital at a bank, insurer, or telecom	
GOAL	Deploy multilingual voice agents for customer service, collections, and loan servicing across 10+ Indian languages	
MOTIVATION	Reduce call-centre cost, expand reach into Tier 2 and Tier 3 India, satisfy RBI and regulatory data-residency requirements	
PAINS	Data sovereignty and compliance sign-off; integration with legacy core-banking systems; proving ROI to leadership	
SUCCESS	Measurable drop in call-centre cost per resolved query, plus demonstrable compliance approval	
CHANNELS	Direct sales, forward-deployed engineers, case studies, conference presence	

2.3 Persona 3 — "Karthik," the AI Application Builder

Karthik		STARTUP PROGRAMME
ROLE	Founder or CTO of an early-stage edtech, agritech, or healthtech startup targeting non-metro India	
GOAL	Build a voice-first product in users' native languages for people who don't type comfortably	
MOTIVATION	Sarvam Startup Program credits; faster time-to-market than building Indic AI in-house	
PAINS	Model accuracy on domain vocabulary (medical, agricultural terms), production reliability, cost as usage scales	
SUCCESS	Admission to the Startup Program, shipping an MVP fast, and a direct feedback channel into Sarvam's roadmap	
CHANNELS	Sarvam Startup Program, Discord, direct outreach	

2.4 Persona 4 — "Mr. Iyer," the Government Stakeholder

Mr. Iyer		PUBLIC-SECTOR PROCUREMENT
ROLE	Programme officer at a state or central government department running citizen services	
GOAL	Deploy voice IVR or chatbot systems serving hundreds of millions of citizens in their own language, entirely within Indian jurisdiction	
MOTIVATION	Digital-inclusion mandates, IndiaAI Mission alignment, national data-sovereignty policy	
PAINS	Procurement complexity, air-gapped and on-prem deployment requirements, accountability for AI errors at national scale	
SUCCESS	A successful pilot that expands to statewide or national rollout on auditable, sovereign infrastructure	
CHANNELS	Direct government relationships, IndiaAI Mission ecosystem, policy events	

2.5 Persona summary matrix

PERSONA	PRIMARY NEED	BUYING MOTION	SARVAM SURFACE USED
Rohan — Developer	Fast, cheap, accurate Indic APIs	Self-serve; card or free credits	Playground, REST API, SDKs
Ananya — Enterprise	Compliant, scalable voice agents	Enterprise sales and contract	Samvaad, forward-deployed engineering
Karthik — Startup	Voice-first Bharat product at low cost	Startup Program application	API, credits, community
Mr. Iyer — Government	Sovereign, auditable, mass-scale AI	Government procurement / mission funding	On-prem and air-gapped deployment

PRIORITISATION NOTE

Rohan is the persona this case study follows through the teardown in **Section 9** and the redesign in **Section 10**. Not because he is the most valuable customer — **Section 13** shows he is not — but because the self-serve path is the highest-volume, most product-manageable surface Sarvam owns end to end.
