

Metrics Tree

The North Star decomposed into six branches and eighteen input metrics — each with a definition precise enough to instrument and an owner accountable for moving it.

ROOT Weekly Successful AI Tasks	BRANCHES 6	INPUT METRICS 18	OWNERS ASSIGNED Product · Growth · Sales · Finance
------------------------------------	---------------	---------------------	---

7.1 The tree

ROOT METRIC

Weekly Successful AI Tasks Completed

Every metric below is an input that moves this number. Nothing is tracked that cannot be traced back to it.

AcquisitionBRANCH 01 M1New signups per week M2New enterprise leads per month M3Docs page visits → signup rate	ActivationBRANCH 02 M4First successful API call rate M5Time-to-first-call, median minutes M6Startup Program conversion rate	EngagementBRANCH 03 M7Avg successful calls per dev per week M8Distinct APIs used per account M9Enterprise agent conversations per week
RetentionBRANCH 04 M10Weekly Active Developers (WAD) M11Enterprise contract renewal rate M1230 / 60 / 90-day retention curve	RevenueBRANCH 05 M13₹ revenue per active developer M14Enterprise ARR M15Credit top-up rate %	ReferralBRANCH 06 M16% signups from Discord / community M17Open-source model → signup rate M18Enterprise reference-driven leads

7.2 Definitions and ownership

A metric without a definition is a debate waiting to happen, and a metric without an owner never moves. Both are fixed here.

BRANCH	METRIC	DEFINITION	OWNER
Acquisition	New signups / week	Count of new developer accounts created	Growth / Marketing
Acquisition	New enterprise leads / month	Qualified enterprise inbound plus outbound leads	Enterprise Sales

BRANCH	METRIC	DEFINITION	OWNER
Activation	First successful API call rate	% of signups reaching one successful call within 24 hours	Product / DevRel
Activation	Time-to-first-call	Median minutes from signup to first successful call	Product
Engagement	Avg successful calls / dev / week	Total successful calls ÷ weekly active developers	Product / Data
Engagement	APIs used per account	Count of distinct API products used — chat, STT, TTS, and so on	Product
Retention	Weekly Active Developers	Developers making ≥1 successful call in a 7-day window	Product / Data
Retention	Enterprise renewal rate	% of enterprise contracts renewed at end of term	Enterprise Success
Revenue	₹ revenue per active developer	Total self-serve revenue ÷ active developers	Finance / Product
Revenue	Enterprise ARR	Annualised enterprise contract value	Finance
Referral	% signups from community	Signups attributed to Discord, community, or OSS releases	Growth

HOW THIS TREE GETS USED

The interventions proposed in **Section 12** each name the specific input metric they are trying to move — Activation M4 and M5 for the onboarding work, Revenue M15 for the mid-tier plan. That traceability is what separates a roadmap from a wish list.
