

Redesign: Developer Onboarding

Five screens that replace product-catalogue browsing with a use-case-first path — from "what are you building?" to a successful call with the cost already explained.

PROBLEM SOLVED	SCREENS	STEPS REMOVED	TARGET METRIC
No guided use-case path	5	2 of 7	First successful call rate

SCOPE DISCIPLINE

This redesigns **one** problem identified in Section 9 — the lack of a guided, use-case-first onboarding path — not the entire Sarvam product. For a live portfolio submission, build these as clickable wireframes in Figma and link the file here.

10.1 Current experience (as-is)

10.2 Proposed experience (to-be)

SEVEN STEPS BECOME SIX, AND THE TWO HIGHEST-FRICTION STEPS DISAPPEAR ENTIRELY

10.3 Wireframes

SCREEN 1 — USE-CASE SELECTOR

What are you building?

Voice bot

Document digitisation

Translation & localisation

Customer support agent

Content / video localisation

I'm not sure yet

SCREEN 2 — RECOMMENDED STACK

For a Hindi voice bot

SAARAS — ASR

SARVAM-30B — LLM

BULBUL — TTS

ESTIMATED COST

₹ 41.50 per 1,000 interactions

SCREEN 3 — CODE + INLINE KEY

Hindi voice bot — ready to run
from sarvamai import SarvamAI
client = SarvamAI(api_key="sk_live_...")
text = client.speech_to_text.transcribe(
file=audio, model="saaras:v3",
language_code="hi-IN")

Generate API key

Run in Playground

SCREEN 4 — FIRST SUCCESS

Success — your first request went through.
It used ₹0.40 of your ₹1,000 free credit.
At this rate you have about 2,500 requests remaining.

SCREEN 5 — USAGE DASHBOARD

99.2%
SUCCESS RATE

₹184
CREDIT USED

4,610
CALLS THIS WEEK

Saaras — ASR

74%

Sarvam-30B — chat

26%

NEXT STEP

You're using 18% of your rate limit. Ready to scale?

See the Growth plan

10.4 Design rationale

DESIGN CHOICE	WHY
Use-case-first entry, not product-first	Matches how developers actually think — "I need a voice bot," not "I need Saaras." Directly closes the Stage 2 friction from Section 9.
Live cost estimate before signup	Resolves the "how far does ₹1,000 actually go?" ambiguity identified at Stage 3.
Inline API key generation	Removes a context switch that currently sits between reading the docs and making the first call.
Dashboard nudge toward the Growth plan	Seeds the missing mid-tier upgrade path identified at Stage 7, at the exact moment the developer is feeling the constraint.

WHAT IS DELIBERATELY UNCHANGED

The Playground, the ₹1,000 universal credit, and the machine-readable docs all survive intact. Section 9 rated them genuine strengths; a redesign that quietly removes working features in pursuit of a new flow is how teams lose ground while shipping.
